PROFESSIONAL PROFILE

Motivated and versatile IT graduate with a BSc in Information Technology and hands-on experience across software development, data engineering, systems support, and enterprise platforms. Has independently built and deployed multiple end-to-end technical projects spanning backend web applications, data pipelines, CRM systems, and cloud-hosted solutions — each completed to a professional standard with testing, documentation, and version control. Currently working as an IT Support Technician Intern at a government agency, developing practical professional habits in a live operational environment. Technically strong, detail-oriented, collaborative, and eager to contribute meaningfully in a team where quality work and continuous learning are valued.

TECHNICAL SKILLS

Programming Languages: Python, Java, C#, C++, JavaScript, SQL — strong OOP fundamentals across all

Backend Development: Django (Python), Spring Boot (Java), ASP.NET (C#) — REST API design, service-layer architecture, MVC patterns

Frontend Development: HTML5, CSS3, JavaScript — responsive layouts, DOM manipulation, component-based interfaces

Databases & Querying: SQL, PostgreSQL, MongoDB, SOQL — schema design, normalisation, complex queries, joins, aggregations, query optimisation

Testing & Quality: JUnit (Java), PyTest (Python), TDD principles — unit, integration, and bulk testing; 86%+ code coverage achieved

Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Power BI — ETL/ELT pipelines, EDA, dashboards, reporting

DevOps & Tooling: Git/GitHub, GitHub Actions (CI/CD), Docker, IntelliJ IDEA, Salesforce CLI, command-line tooling

Cloud & Infrastructure: Microsoft Azure (Foundational), Apache Kafka, TCP/IP networking, Cisco Packet Tracer

Enterprise Platforms: Salesforce — Apex, SOQL, Lightning Web Components, custom objects, permission sets, CLI deployment

IT Support: Hardware & software troubleshooting, Windows & Office 365, user account management, helpdesk ticketing, asset inventory

SOFT SKILLS

Problem-Solving: Analytical and methodical — breaks down complex problems, identifies root causes, and delivers structured, well-reasoned solutions

Communication: Clear and professional in writing and verbally; comfortable explaining technical concepts to non-technical audiences and collaborating across functions

Ownership & Accountability: Self-directed and reliable — takes full responsibility for tasks from start to completion without requiring external supervision

Continuous Learning: Proactively builds skills beyond formal study — independently adopted Salesforce, Docker, CI/CD, and enterprise architecture patterns through personal project work

Attention to Detail: Quality-first by default — structured testing, documented pipelines, and accurate record-keeping maintained consistently across all work

Teamwork: Collaborative and adaptable — experienced working alongside senior professionals, taking feedback constructively, and contributing to shared team goals

Resilience: Composed and reliable under pressure — manages multiple concurrent priorities in a fast-paced environment while maintaining standards throughout

WORK EXPERIENCE

IT Support Technician Intern | Mpumalanga Economic Growth Agency (MEGA) Mar 2026 – Present

- **First-line technical support:** diagnose and resolve hardware, software, and network issues for staff across the organisation — applying systematic fault-isolation methodology, logging incidents accurately, and escalating with full documented context when required.
- **User account & access management:** create and manage user accounts and permissions across Windows and Office 365 environments in line with security protocols and least-privilege principles.
- **IT asset management:** maintain an accurate register of hardware and software assets, tracking deployments, repairs, and updates across the organisation.
- Collaborate with senior IT engineers on infrastructure projects including network configuration and system upgrades — contributing to larger initiatives while maintaining day-to-day support quality.
- Communicate clearly with non-technical end-users, manage multiple concurrent priorities, and participate in structured weekly team meetings — building professional habits of reliability, accountability, and cross-functional collaboration.

PROJECTS

Heritage Site Information System — Full-Stack Web Application 2024 – 2026

- **Designed and built a complete backend web application using Django and a hybrid PostgreSQL/MongoDB architecture,** implementing REST APIs, service-layer design, and normalised relational schemas — covering the full SDLC from requirements through deployment.
- Applied TDD throughout using PyTest and JUnit; containerised with Docker; automated CI/CD via GitHub Actions. Built responsive HTML/CSS/JavaScript frontend views integrated with the backend. Full technical documentation maintained in GitHub.

Technologies: Django, Python, Java, PostgreSQL, MongoDB, HTML, CSS, JavaScript, PyTest, Docker, GitHub Actions, Git

NGO Donor & Programme Management System — Salesforce Enterprise CRM Feb 2026

- **Designed and deployed a full Salesforce CRM application from scratch:** custom objects, Apex triggers (thin-trigger/fat-handler architecture), SOQL aggregate queries, Lightning Web Component dashboard, and full CLI-based deployment — achieved 86%+ Apex test coverage across 7 structured test classes.
- Implemented automated financial reconciliation logic, high-value transaction flagging, role-based access via Permission Sets, and a real-time stakeholder dashboard — operating independently as developer and administrator throughout.

Technologies: Salesforce Apex, SOQL, Lightning Web Components, HTML, CSS, JavaScript, Salesforce CLI, Git

Socio-Economic Wellbeing Analysis (NIDS) — Data Pipeline & Analytics Jan 2026

- Built a reproducible Python ETL pipeline processing 150,000+ records across 5 survey waves — cleaning, validating, and harmonising multi-source data before producing longitudinal visualisations and stakeholder-ready reports.

Technologies: Python, Pandas, NumPy, Matplotlib, Seaborn, Excel, Git

EDUCATION

BSc Information Technology | North-West University Feb 2022 – Nov 2025

- Relevant coursework: Object-Oriented Programming, Software Engineering & SDLC, Database Design & Administration, Data Structures & Algorithms, Systems Analysis & Design, Networking Fundamentals, Operating Systems, Mathematical Foundations of Computing, Statistics.

ADDITIONAL INFORMATION

Languages: Siswati (Native), English (Fluent), Zulu (Fluent)
